

SOLAR FLARE DAMAGE EXPERIMENT

SCHOOL: INDIAN CREEK ELEMENTARY SCHOOL

LOCATION: INDIANAPOLIS, IN

FLIGHT PROVIDER: WORLD VIEW

GRADES: ELEMENTARY SCHOOL

STUDENT EXPERIMENT DESCRIPTION

What our experiment does is that it collects temperature data from the atmosphere. We seek to learn how it collects data. Our goal is to find out what solar flares have done to the atmosphere. We think we will discover information about solar flares to help us to create a device or come up with ways to not be negatively impacted by future solar flares. Our inspiration was from our teacher introducing us to solar flares, and then we started wanting to learn what happens to the atmosphere.
